

Name:- Aditya Gupta  
Roll No:- 2215000094

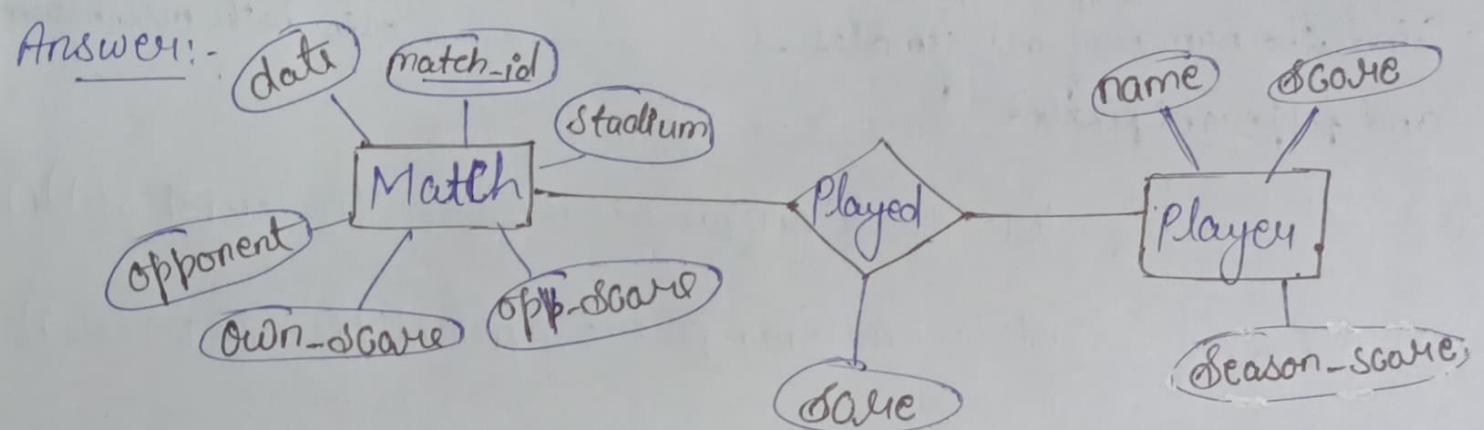

Class Roll No:- 47 (B)

~~Roll No:-~~

Sub:- DBMS

## Assignment-1. (Set-4)

Ques 1:- Design an ER Diagram for keeping -----  
----- modeled as derived  
attributes.

## E-R Diagram for favourite team statistic

Ques 2:- Consider a database with the following schema:-

Person (name, age, gender)

Frequent (name, pizzeria)

Fats (name, pizza)

Serves (pizzeria, pizza, piece)

name is Key

(name, pizza) is a Key

(name, pizza) is a Key

(pizzeria, pizza) is a Key

Name:- Aditya Gupta

Univ No:- 2215000094

Write a relational algebra expression for the following queries:-

(a) find all ----- under the age of 18.

Answer:-  $\pi_{Pizzeria} (\sigma_{age < 18} (Person) \bowtie frequents)$

(b) Find all the name of ----- mushroom or pepperoni (or both).

Answer:-  $\pi_{name} (\sigma_{gender = 'female' \text{ AND } (pizza = 'mushroom' \text{ OR } pizza = 'pepperoni')} (Person \bowtie Eats))$ .

Person (name, age, gender), frequents (name, pizzeria), Eats (name, pizza)  
Serves (Pizzeria, pizza, price)  
(c) Find the names of all females ----- eats both mushroom and pepperoni pizza.

Answer:  $\pi_{name} (\sigma_{gender = 'female' \text{ AND } pizza = 'mushroom'} (Person \bowtie Eats)) \cap$

$\pi_{name} (\sigma_{gender = 'female' \text{ AND } pizza = 'pepperoni'} (Person \bowtie Eats))$

Person (name, age, gender)

frequents (name, pizzeria)

Eats (name, pizza)

Serves (pizzeria, pizza, price).

Ques 3:- Let a Relation R ----- number of Super keys?

Answer:- Super key of  $(a_1, a_2)$  + Super key of  $(a_1, a_3)$  -  
Super key of  $(a_1, a_2, a_3)$

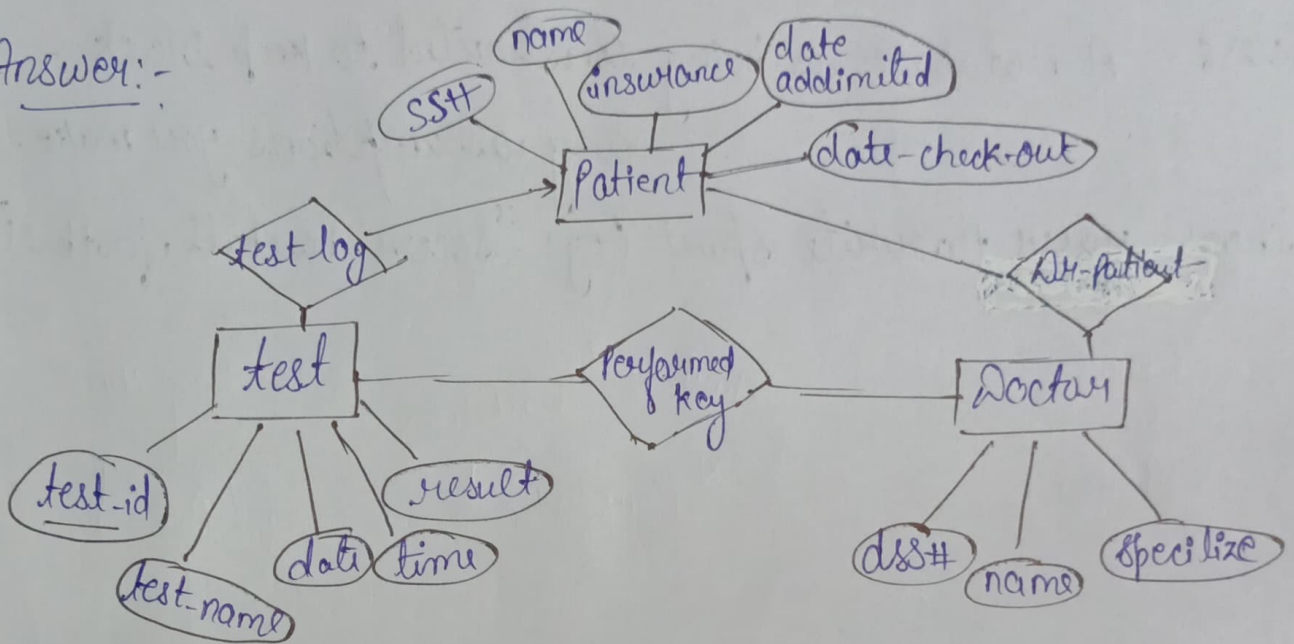

Name:- Aditya Gupta

univ\_No:- 22150500 94

$$\Rightarrow 2^{(n-2)} + 2^{(n-2)} - 2^{(n-3)} \text{ "Ans"}$$

Ques 4:- Construct an E-R Diagram -----  
----- tests and examination.

Answer:-

E-R Diagram for a Hospital

Ques 5:- In a schema with ----- by the above set?

- a)  $CD \rightarrow AC$
- b)  $BD \rightarrow CD$
- c)  $BC \rightarrow CD$
- d)  $AC \rightarrow BC$
- e)  $B \rightarrow E$

Answer:- The correct answer is  $\Rightarrow$  <sup>(b)</sup>  $BD \rightarrow CD$   
closure set of  $CD = ABACBDE$

Name:- Aditya Gupta

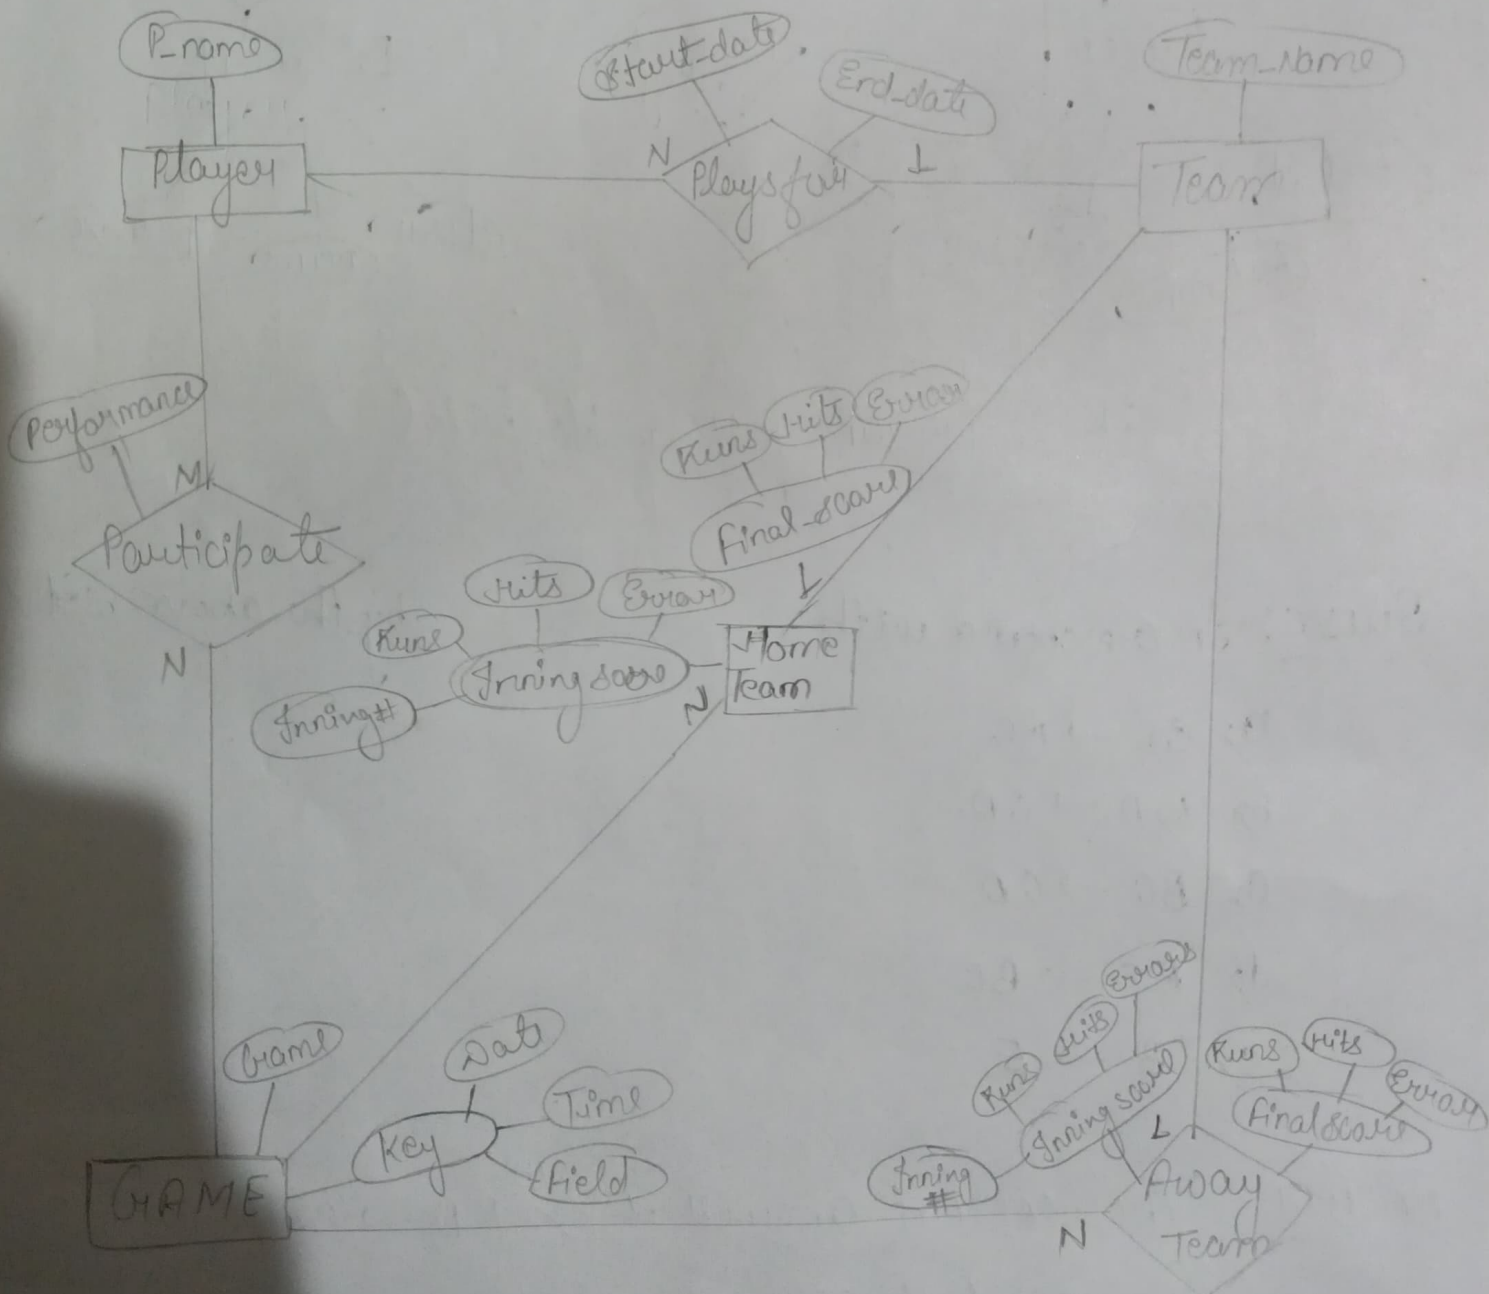

Univ. NO:- 2215 000094

closure set of BC = ECDAB

closure set of AC = BCDABE

closure set of BD = Cannot be derived from set of FD's.

Ques 6:- A Database is being constructed to keep track -  
----- any assumptions you make.  
choose your favourite sport (eg: "soccer, baseball, football")

Name:- Aditya Gupta

Univ. NO:- 2215000294

Ques 71:- Consider the E-R Diagram . . . . .  
into a relational schema.

Solution . Tables we have :-

- 1> Doctor (Emp-id, Name, Extn)
- 2> Patient (Patient-id, Name, DOB)
- 3> Ward (Name)
- 4> Drug (If, Recs, Dosage)
- 5> Bedname ( )
- 6> Nurse (Name, Emp-id)
- 7> Diagnose (Patient-id, Emp-id)
- 8> Admitted-in (Patient-id, Name)
- 9> Managed by (Name, Emp-id)
- 10> Base doc (Name, Emp-id)
- 11> Treatment (Patient-id, Emp-id, Time, date)

Ques 81:- Let  $R(A, B, C, D, E)$  . . . . . Super Keys.

Answer:- Given,  $R(A, B, C, D, E)$   
functional dependencies:-

$AB \rightarrow C, C \rightarrow D, B \rightarrow E$

(A) CK = AB (Candidate Key) ( $\because AB = (AB C D E)$ )

Number of Candidate Key = 1.

Name:- Aditya Gupta

Univ No:- 2215000094

→ Super key = AB, ABC, ABD, ABE, ABCD, ABCE, ABCDE, ABDE.

Number of Super key = 8.
